ABSTRACT OF THE DISCLOSURE

[0116] Apparatus for dispensing paper from rolls which feeds continuously, roll to roll, and does not require extra procedure to bring stub roll into position. The apparatus has <sup>device</sup> means for holding and positioning at least first and second rolls of paper with respect to each other; <sup>device</sup> means for dispensing paper from the first roll; <sup>device</sup> means for dispensing paper from the first and second rolls simultaneously when the first roll reduces to a predetermined diameter of paper, <sup>device</sup> means for positioning the depleted first roll for replacement without the necessity of removing the second roll; and <sup>device</sup> means for dispensing from the second and replacement rolls simultaneously when the second roll reduces to a predetermined diameter of paper. The apparatus also has a proximity sensor, which senses when a hand is placed near the dispenser, and thereupon dispenses a set amount of towel. The dispenser incorporates <sup>device</sup> means for dissipating static charges to a local ground.
